

Frost-Proof Sillcock Anti Siphon **OPERATING INSTRUCTIONS**

When operating your outside hydrant, it is recommended to turn the handle counter clockwise to its full on position before throttling back to desired flow. When closing this valve, close in a continuous motion until flow has stopped.

This valve is equipped with a “back siphon protection system” which includes a spring loaded piston assembly that when not in a full flow condition can cause a “chattering” as flow passes.
